

Roots* Rotary Lobe Positive Displacement Blowers

Universal RAI* Series | RAM* Series | RCS* Series | DVJ and DPJ Series

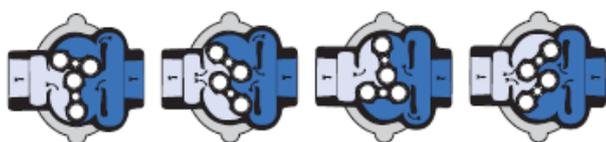

Operating Principles

Bi-Lobe Principle

URAI, URAI-DSL, URAI-G, RAM, RCS Series

Two figure-eight lobe impellers mounted on parallel shafts rotate in opposite directions. As each impeller passes the blower inlet, it traps a finite volume of air and carries it around the case to the blower outlet, where the air is discharged. With constant speed operation, the displaced volume is essentially the same regardless of pressure, temperature or barometric pressure. Timing gears control the relative position of the impellers to each other and maintain small but finite clearances. This allows operation without lubrication being required inside the lobe cavity.

WHISPAIR* Principle

URAI-J, URAI-J DSL, RAM-J, RAM-GJ, RAM-VJ, RCS-J

Incoming air is trapped by the impellers. Simultaneously, pressurized air (right) is being discharged. As the impeller passes the wrap-around flange, the Whispair jet equalizes pressure between trapped air and discharge area, aiding impeller movement and reducing power. Impellers move air into the discharge area. Backflow is controlled, resulting in reduction of noise and pulsation relative to conventional blowers.

DVJ/DPJ Principle

2504 DVJ, RAM DVJ, 721 DVJ, 406 DPJ

Incoming air is trapped between the impellers. Simultaneously, pressurized air is being discharged. As the impeller passes the jet plenum, cooled, pressurized air flows into the space between the impeller and cylinder. This cools the trapped air, helps control thermal growth and allows higher pressure ratios. The trapped air is then moved into the discharge flange. Backflow is reduced, resulting in lower operating noise level and reduced shock loading on the equipment.

Warranty

Proven designs, manufacturing and material provide assurance for superior operation. Local, factory trained, service centers offer timely response to your unique needs. Roots products are sold subject to Howden Roots general terms of sale and warranty policy; contact your nearest Howden Roots office for more information.

Universal RAI Series Rotary Positive Displacement Blowers

All Universal RAI (URAI) series blowers are heavy duty rotary blowers in a compact, sturdy design engineered for continuous duty and maximum reliability. These blowers have a time tested lubrication system. Howden Roots exclusive “figure-8” gearbox design improves oil distribution to the timing gears and lengthens bearing life.

This series features a grey iron casing, carburized and ground alloy steel spur timing gears secured to steel shafts with a taper fit and locknut, and grey iron involute impellers. Oversized anti-friction bearings are used, with a heavy duty cylindrical roller bearing at the drive shaft to withstand V-belt pull. Viton™ lip seals maintain proper lubricant at the bearings

Universal RAI Blower

Frame Sizes 22 thru 718

The standard URAI blower features convenient grease lubrication on the drive end. The feet permit easy in-field adaptation to either vertical or horizontal installation requirements and any of four drive shaft positions – top, bottom, right or left hand. All frame sizes are center-timed to allow for rotation in either direction.

Universal RAI DSL Blower

Frame Sizes 32 thru 615

This URAI blower features Dual Splash Lubrication (DSL). There is splash lubrication at the gear end and the drive end. The drive end has two shaft-mounted slingers and the gear end features Howden Roots exclusive “figure-eight” gearbox design that work together to improve oil distribution and to maximize gear and bearing life. The oil reservoirs feature sight glasses for accurate oil level confirmation.

Universal RAI-G Gas Blower

Frame Sizes 32GJ thru 615GJ

URAI gas blowers feature mechanical seals and Viton™ o-rings. The seal system is designed to meet or exceed gas industry safety standards, including provisions for purge gas in the headplates. The URAI gas blower uses detachable steel mounting feet for adaptation of drive shaft position to meet vertical or horizontal installation requirements.

Universal RAI-J WHISPAIR Blower

Frame Sizes 33J thru 56J

Howden Roots refined the standard URAI line using computer-aided design techniques to incorporate the Roots exclusive WHISPAIR jet. The WHISPAIR jet uses shock suppression techniques for noise and pulsation reduction. This exclusive WHISPAIR feature can reduce noise 3-5 dB on typical installations. Like the standard URAI blower, the URAI-J features universal detachable steel mounting feet to permit easy in-field adaptation to any of four positions and grease lubrication on the drive end.

Universal RAI-J DSL Blower

Frame Sizes 33J thru 56J

This URAI blower combines the WHISPAIR design with the dual splash lubrication feature to offer the longest life and quietest performance of the URAI series.

Notes: 1. Pressure ratings based on Inlet air at standard pressure of 14.7 psia, standard temperature of 68° F, and specific gravity of 1.0.
2. Vacuum ratings based on Inlet air at standard temperature of 68° F, discharge of 30" Hg and specific gravity of 1.0.
3. Available with Dual Splash Lube (DSL) feature.
4. Available with Whispair Jet (URAI-J) feature.
5. Available with mechanical seals (see performance for URAI-G).

NOTE: This dimensional table is for the Universal RAI Blower model and is provided for example purposes. Not suitable for construction purposes. Please inquire for detailed dimensions of the other URAI models.

RAM Series Rotary Positive Displacement Blowers

Roots RAM series units are recognized by many as the most volumetrically efficient blowers in the industry. Unless otherwise noted, RAM series equipment may operate under either vacuum or pressure application with no equipment modification, and can provide simultaneous vacuum and pressure for a system with a single unit.

RAM series units feature integral-shaft ductile iron impellers with involute profiles. Headplates and the rigid casing are cast grey iron, while the drive end and gear covers are aluminium. Carburized and ground alloy steel spur timing gears are securely mounted on tapered shafts. All units in the RAM series feature cylindrical roller bearings and splash lubrication for maximum life.

Detachable steel mounting feet permit adaptability to either vertical or horizontal installation requirements.

Piston-ring shaft seals reduce gas leakage through the headplates, while lip-type oil seals maintain lubrication in the bearings. RAM units are splash lubricated on both sides with high volume oil reservoirs and convenient sight glasses.

RAM Blower

Frame Sizes 404 thru 624

All standard units are center-timed to allow rotation in either direction.

RAM-J WHISPAIR Blower

Frame Sizes 404J thru 624J

RAM-J units feature the original WHISPAIR jets to control pressure equalization by feeding backflow in the direction of impeller movement. The Whispair feature results in uni-directional flow and drive shaft rotation.

RAM-GJ Gas WHISPAIR Blower

Available on all RAM Frame Sizes

RAM standard blowers feature a piston ring system between the compression chamber and vent cavities. This models vent cavities are plugged for purge or drain. Special long-life mechanical seals with Viton™ O-rings are installed at each bearing to control gas and oil leakage. The seal incorporates a proprietary geometry that promotes enhanced cooling and extended life.

RAM gas units are suitable for both vacuum or pressure service. Alternate materials and optional O-ring material are available for these machines. Please contact the factory for more information.

RAM-VJ Water Sealed WHISPAIR Vacuum Blower

Frame Sizes 406J thru 624J

These units are equipped with an inlet spray nozzle and seal water flow meter for water injection. This feature cools the unit enabling deeper vacuum levels than possible with conventional rotary vacuum blowers.

RCS Series Rotary Positive Displacement Blowers

Roots RCS series units are heavy-duty units with integral-shaft ductile iron impellers in an involute profile. The headplates, gear cover, drive end cover and rigid, one-piece casing are grey iron. Carburized and ground alloy steel spur timing gears are taper mounted on the shafts and secured with a locknut. Cylindrical roller bearings combined with high volume oil reserves offer low maintenance and trouble free operation.

Piston rings reduce air leakage through the headplate shaft openings, while lip-type oil seals maintain lubricant in the roller bearings.

All RCS series blowers are equipped with splash oil lubrication at both ends of the blower.

RCS Blower

Frame Sizes 817 thru 827

All standard units are center-timed to allow rotation in either direction. RCS series units incorporate detachable steel mounting feet to permit adaptability to either vertical or horizontal installation.

RCS-J WHISPAIR Blower

Frame Sizes 715J thru 832J

RCS WHISPAIR units reduce noise and power loss by utilizing a wrap-around plenum and proprietary WHISPAIR jet ports to control pressure equalization. The WHISPAIR jets meter discharge pressure in the direction of impeller movement, thereby aiding rotation. Discharge pulsation is reduced by the pre-pressurization of the blower chamber. This reduced pulsation results in lower noise, and reduced shock loading on the system components.

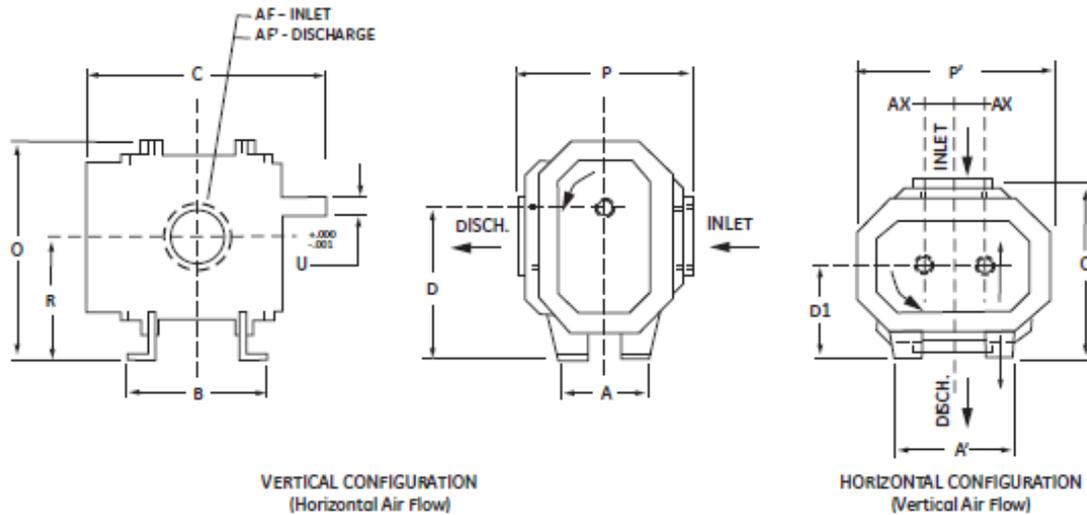

RCS WHISPAIR units frames 817J thru 832J have feet integral to the headplates.

Notes: 1. All dimensions are in inches. 2. Weights are in pounds, and are approximate. 3. Do not use for construction.

DVJ and DPJ Rotary Positive Displacement Blowers

These units feature an integral discharge jet plenum design, allowing cool, atmospheric air to flow into the casing. This unique design permits continuous operation at high vacuum levels (up to blank-off) with a single stage unit. In the case of Roots DPJ blowers, high pressure discharge air is cooled before injecting into the jet plenum.

Headplates and the rigid casing are cast from grey iron, with aluminium drive end and gear covers. Carburized ground alloy steel spur timing gears are securely mounted on taper end shafts. These units are designed with detachable steel mounting feet to permit adaptability to high pressure discharge left, right or vertically upwards.

2504 DVJ WHISPAIR Vacuum Blower

Frame Size 2504 DVJ

This unit features ball bearings, lip seals, splash lubrication at the gear end and grease lubrication at the drive end.

RAM DVJ Vacuum Blower

Frame Sizes 406 DVJ, 412 DVJ and 616DVJ

RAM DVJ units feature integral-shaft ductile iron impellers with involute profiles. The top shaft is extended for side outlet blowers, and either left or right shaft can be extended for top or bottom outlet blowers. RAM DVJ units feature cylindrical roller bearings for maximum life. Piston ring shaft seals reduce gas leakage through the headplates, while lip-type oil seals maintain proper oil levels in the bearings.

The units are splash lubricated on both sides with high volume oil reservoirs. They can be equipped with mechanical seals for gas applications. Please contact us for more information on gas applications.

721 DVJ WHISPAIR Vacuum Blower

Frame Size 721 DVJ

This unit has the same durable features as the RAM DVJ blowers. However, is not currently configured for gas applications.

RAM 406 DPJ Dry High-Pressure Blower

Frame Size 406 DPJ

In this unit, the WHISPAIR jets control pressure equalization by feeding cooled discharge air in the direction of impeller movement, thereby aiding rotation. Cooled discharge air is mixed with incoming air to control temperature rise. This design permits continuous operation with discharge pressures up to 30 PSIG in a single stage unit. RAM DPJ units feature cylindrical roller bearings and is splash lubricated at both the gear and drive ends. Piston rings are used to reduce air leakage through the headplate shaft openings, while lip-type oil seals maintain proper oil levels in the bearings. The top shaft is extended for side outlet blowers, and either left or right shaft can be extended for top outlet blowers. RAM DPJ units can be equipped with mechanical seals for gas application. Please contact us for more information on gas applications.

- Notes:
1. Vacuum ratings based on Inlet air and Jet air standard pressure and standard temperature of 68° F, discharge and Jet pressures of 30" Hg and specific gravity of 1.0.
 2. Refer to factory for performance guarantee above 24" HgV.
 3. DPJ ratings based on Inlet air at standard pressure of 14.7 psia, standard temperature of 68° F, and specific gravity of 1.0.

Configurations

Roots blowers are available in two basic configurations to meet nearly any piping arrangement or installation requirement. Orientation for inlet and discharge connections is determined from the drive end:

Vertical Configuration:

For vertical configuration, one impeller is mounted above the other, unless otherwise noted the blower drive end located opposite the timing gears. Inlet and discharge connection flanges are positioned to provide horizontal air/gas flow. Specify blower driver for either top or bottom shaft.

Horizontal Configuration:

For horizontal configuration, impellers are located side-by-side. Unless otherwise noted, the blower drive end is located opposite the timing gears. Inlet and discharge connection flanges provide a vertical air/gas flow. Specify blower driver for either left or right hand shaft.

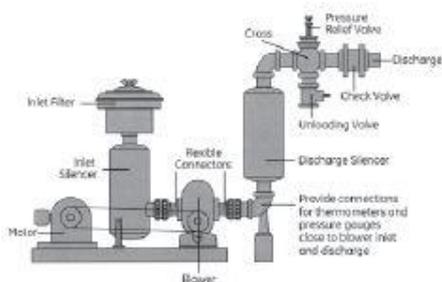

Special Note:

URAI-J, URAI-J DSL, RAM-J, RAM GJ, RAM-VJ and RCS-J models are designed to operate with only one shaft rotation direction to take full advantage of the WHISPAIR feature. Therefore, "J" blower should be operated in the following combinations only:

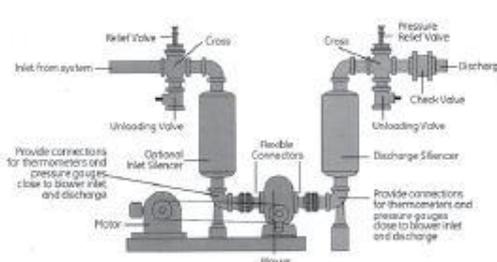

- CCW Rotation facing blower drive shaft: Bottom Shaft; Right side discharge or a Left Shaft; Bottom discharge.
- CCW Rotation facing blower drive shaft: Top Shaft; Left side discharge or a Right Shaft; Top discharge.
- CW Rotation facing blower drive shaft: Bottom Shaft; Left side discharge or a Right Shaft; Bottom discharge.
- CW Rotation facing blower drive shaft: Top Shaft; Right side discharge or a Left Shaft; Top discharge.

Typical Application Packages

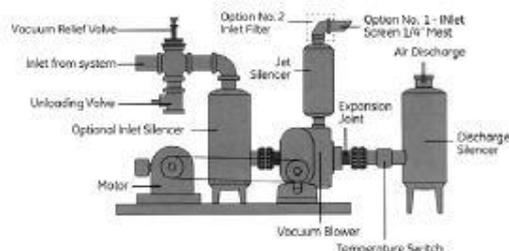

Pressure Application - Inlet open to atmosphere

Gas Application - Closed Loop Piping

High-Vacuum Application - w/DVJ Vacuum Blower

Vacuum Blower Application - Discharge open to Atmosphere
